

You can relax...

knowing that your data is secure.

Data Protection Solution for Small to Mid-Sized Enterprises

In today's knowledge-based economy, you can't afford to lose the crucial business information stored on the hard drives of your company's computers. True, Microsoft Windows Small Business Server 2003 (MS-SBS) includes a utility you can use to regularly backup your files, email messages and website. It has limitations, however.

For one thing, you can only back up information that resides on the MS-SBS server itself. Data stored on PCs and laptops across your LAN may also need to be protected as they might contain information that's crucial for your day-to-day operations, as well as legal compliance.

A traditional local tape drive solution requires an ongoing investment in time, training, technology and supplies, as well as daily user interaction. Managing storage of tapes offsite is a chore, and restoring data lost between storage periods is difficult.

Bottom line, traditional backup to tape solutions are expensive, time-consuming and unreliable.

Now There's a More Effective Solution!

eTegrity automatically and securely backs up all your data - data that resides on every machine on your LAN, if required. And it backs it up directly to the onsite appliance while simultaneously backing a copy to the offsite storage vault, requiring no daily user interaction.

No time-consuming manual programs. No tapes to manage or store. No expensive tape hardware to maintain. You can back up more often, minimizing data loss between runs. This enables the recovery of lost data quickly, either over the Internet or restore up to 30 generations from the local eTegrity appliance.

Now there's a new bottom line. Simpler administration. Lower backup overhead. **The peace of mind that comes from knowing that your business is fully disaster recovery ready. Automatically.**

Set Your Mind At Ease

- **Fast, easy installation:** With eTegrity's unique agentless technology, there's just one software application installed on the appliance provided by eTegrity.
- **All your data is protected:** The full automated process backs up every machine you choose to protect, across your LAN, using your existing Internet connection.
- **Lower backup costs:** You pay only for the total aggregate amount of data protected - no matter how many machines you are protecting.
- **Lower admin costs:** Eliminates many costs associated with technology and tape storage. Upgrades are silent and automatic, without user intervention. The appliance is maintained by eTegrity as part of your service agreement.
- **Fast and efficient data recovery:** Faster restores from the local appliance, or restore critical data quickly from the secure offsite vault.
- **WAN Optimized:** Data De-Duplication across all sites, block-level incremental backup and compression reduce the amount of data transmitted to the vault.
- **Data security:** Advanced security and authentication algorithms, including AES encryption, ensure the safety and confidentiality of your data at all times.
- **World Class Support:** Unlimited support by certified network engineers

Faster Backup

The heart of eTegrity is the DS-Client, software that runs on the provided appliance. It automates and simplifies the backup process as much as possible.

Back up as often as you choose. Incremental backups, down to the block file level, significantly reduce the amount of data transmitted. The DS-Client further reduces data transmission by eliminating common files across your entire LAN, and compressing your data before it's encrypted and transmitted offsite.

Faster Recovery

You can recover any file generation (point-in-time) to the original location, or any alternate location you choose. You can store your data online, or request it on CD, tape or any other media. Also, eTegrity's unique appliance approach allows you to restore from up to 30 generations of local backups. You can even automatically send your data to deep archive (for regulatory purposes) after a pre-specified time period.

Built-in Security and Confidentiality

A high level of data security is a key element in the DS-Client design. Your data is stored offsite in encrypted format. For added security, all encryption and decryption takes place at your premises. We never escrow your encryption key.

Software & Hardware Requirements

The DS-Client Software runs on the provided eTegrity appliance. eTegrity is responsible for maintaining the appliance, as part of the service. Data is transmitted offsite securely using your existing Internet connection.

Protect Data Across Your LAN

With the unique agentless technology, you can protect data on the server, and every other machine on your LAN, including workstations, laptops, other servers, other operating systems. One piece of software will protect your entire LAN, without having to install an agent on each target machine you want to protect!

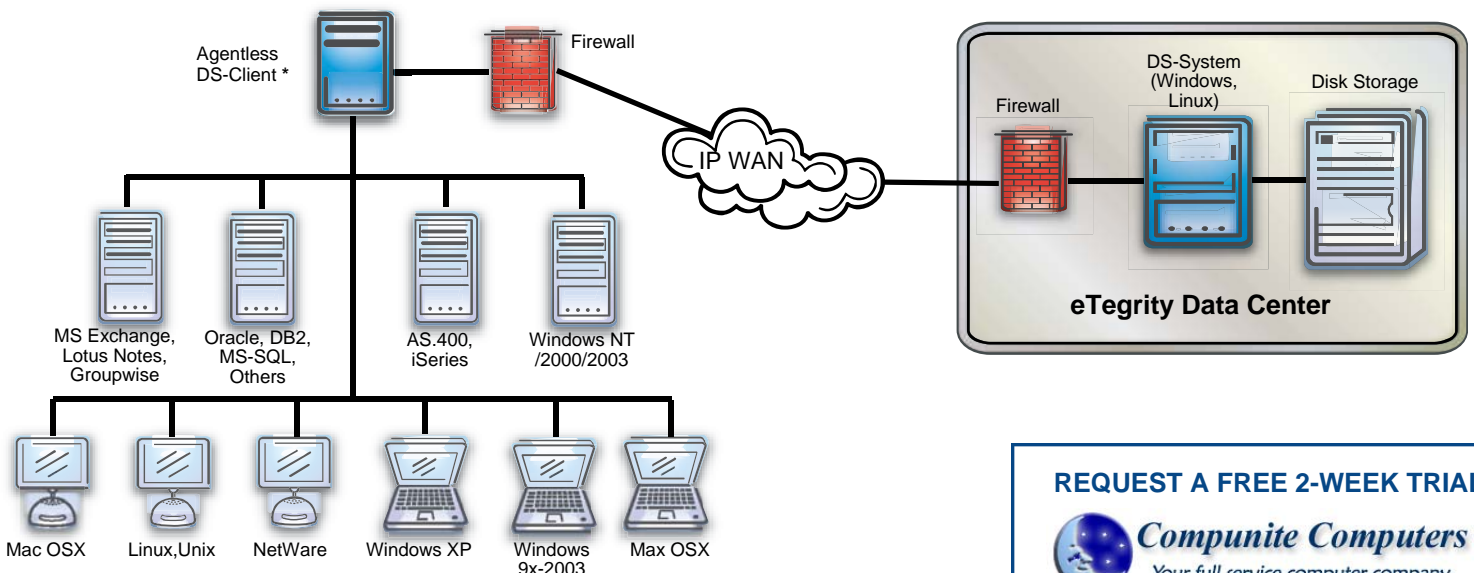

Lower Backup/Restore Costs

Eliminate the hidden costs associated with tape backup:

- Tape technology upgrades/replacements
- New & replacement tapes
- Offsite tape storage
- Training Staff

Protect Your Business from Disaster by Protecting Your Information

Don't just take our word for it, see for yourself! Contact us for a free, no-obligation, 2-week trial.

* **New Feature:** The most recent backup set can be kept on the local network, in addition to the remote vault.
